

Protect access to patient information

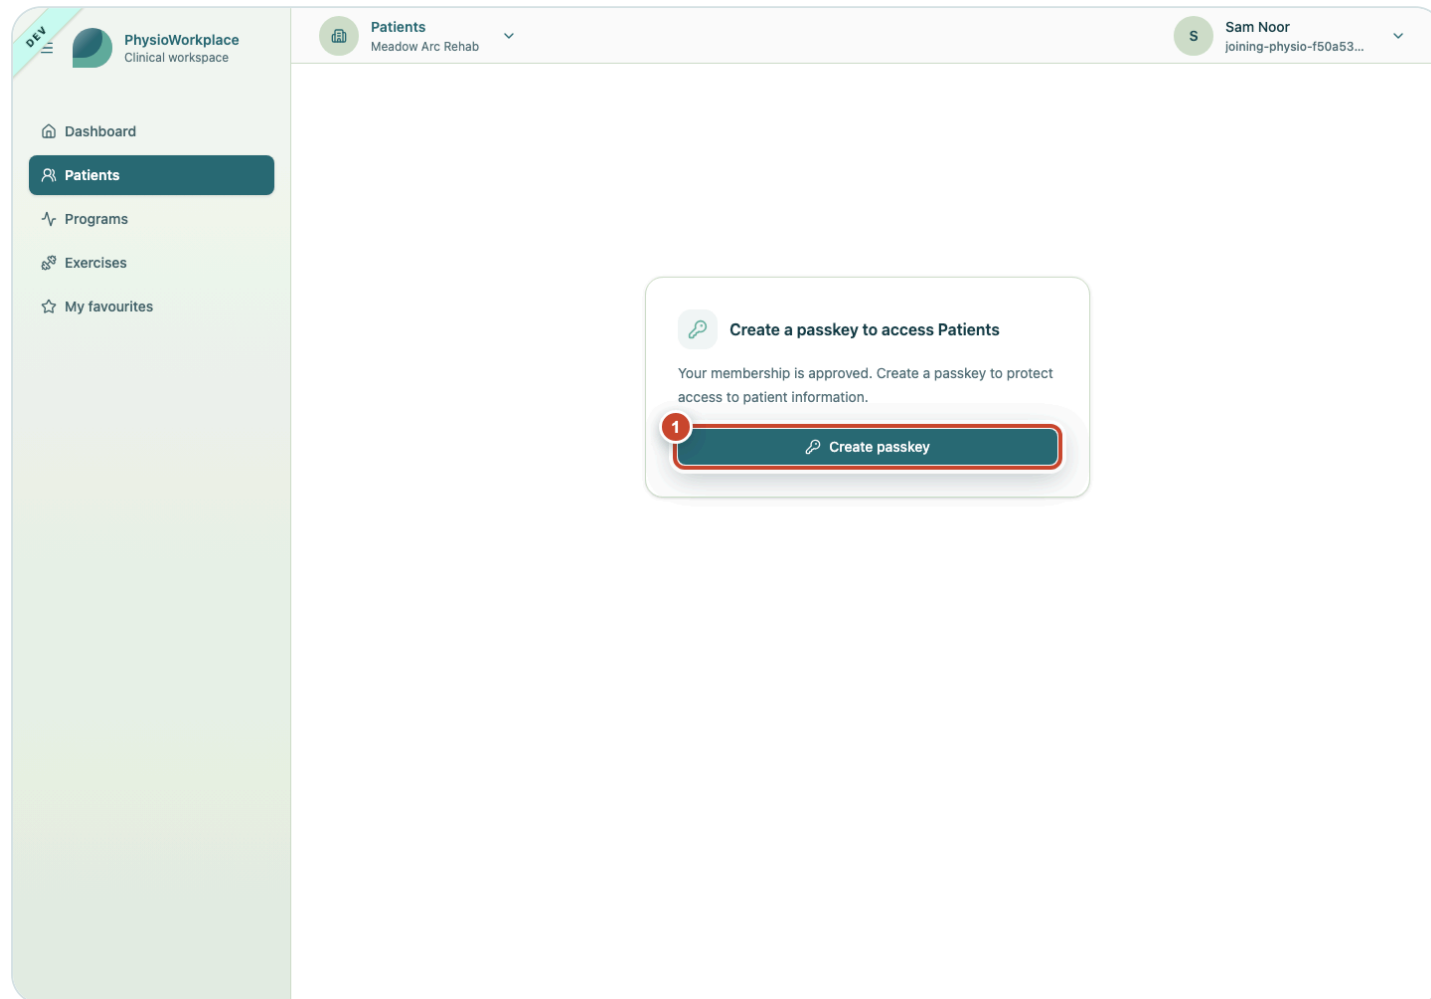

Create a passkey, which lets you verify your identity with your device or password manager without a password, and use it to open the patient register in an approved Workplace.

1

Create a passkey

Where you are: The patient register requires a passkey before patient information can be opened.

What to do: Select Create passkey and follow your browser's instructions.

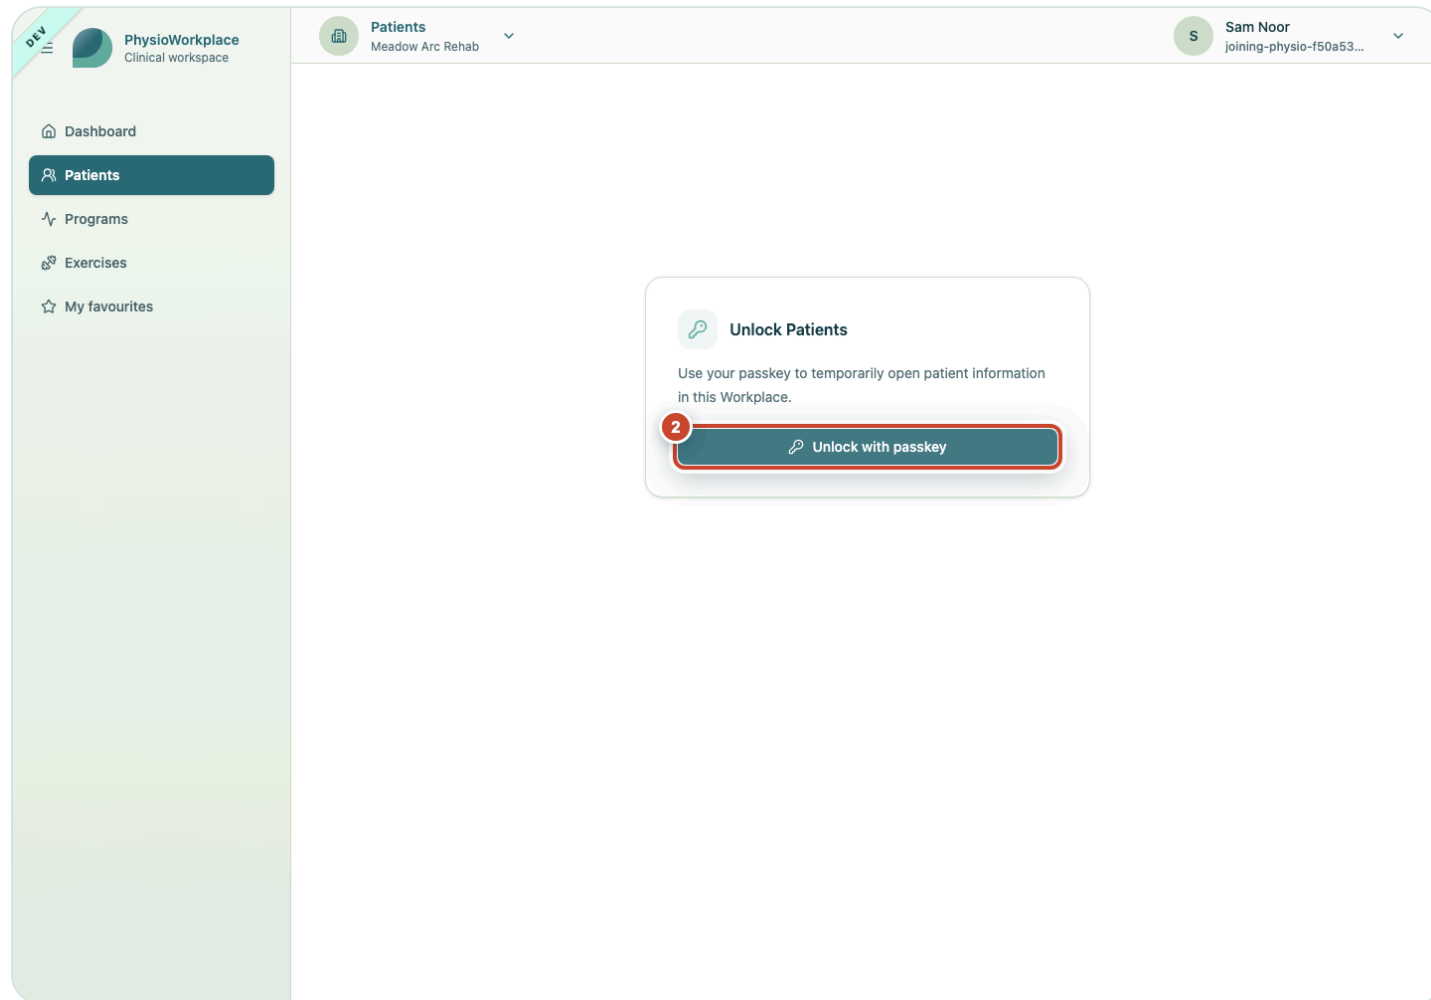

Complete when: Your passkey is registered for the active Workplace.

2

Unlock patient information

Where you are: Your passkey is registered and the patient register remains locked.

What to do: Select Unlock with passkey and confirm in your browser.

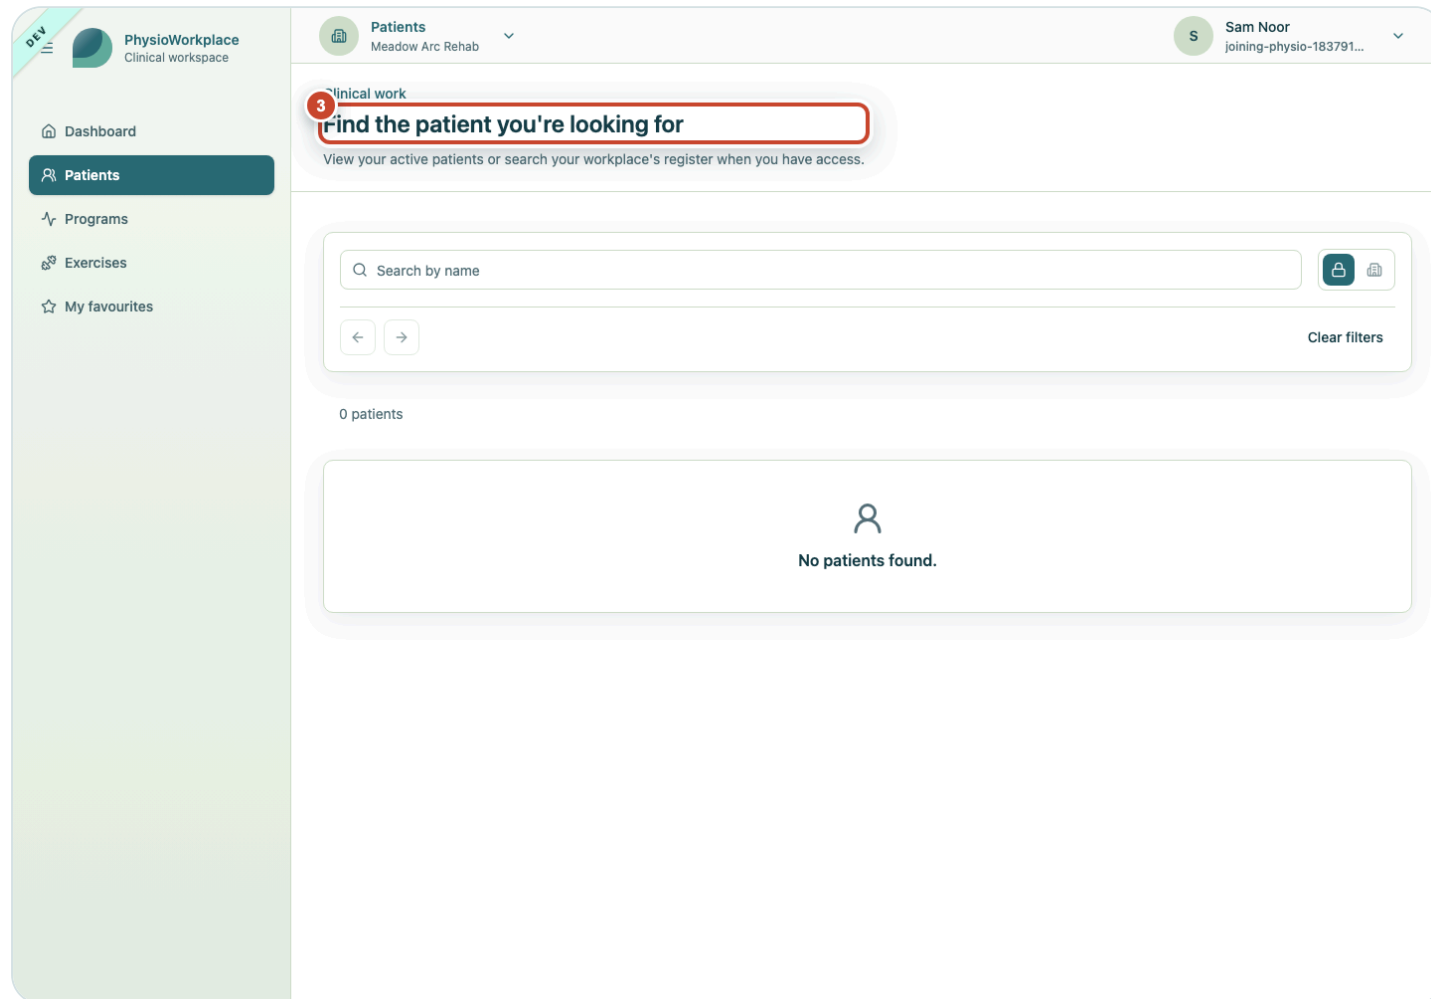

Complete when: The patient register opens temporarily for the active Workplace.

3

Check the patient register

Where you are: The Patient register heading appears when unlocking is complete.

What to do: Check that the correct Workplace is active before continuing.

Complete when: You can now work with the patient information covered by your access.
